## Feature Enhancements

- The USPS Server now excludes the need to have “Auto Select DC with Priority” checked when Priority Mail Commercial is enabled.
- Added the ability for the USPS to handle 9-digit zip codes without causing the system to become unresponsive.
- Added the ability to support zip codes starting with “851” (Arizona) from the Client Address screen.
- Added the ability to add the Certified Mail special service with the Priority Mail Commercial rate.

## Fixes

- Due to changes made to the USPS and FedEx websites, NavTracker couldn't verify deliveries. This issue has been addressed and fixed with NavTracker v1.0.9.805.
- Previously, the product installer would not install the UPSlink portion for downloads because it was searching for a CD in the CD/DVD-ROM. This has been fixed with Navigator v.1.0.573.628 “FO”.

## Instructions

1. Close ALL manifests and exit the FriendShip Navigator application BEFORE installing this update.
2. Download the latest production build from the <http://www.solutions.neopost.com/software/> website. The build is provided in a ZIP file.
3. Save the ZIP file anywhere on the computer that runs the FriendShip Navigator software. Extract the contents of the ZIP.
4. Using Windows Explorer, double-click the SETUP.EXE file to begin the installation.
5. Follow the on-screen prompts for installing the software using the EXPRESS-UPGRADE ONLY installation.
6. The Navigator Product Installer will begin upgrading the software. When the installation is complete, restart the computer.

## Additional Notes

The CD for FriendShip Navigator 1.0.573.628 “FO” cannot be ordered from Memphis Distribution. This version is only available as a downloadable version.

## Documentation

All technical-related documentation for Shipping & Accounting products is available from the Neopost Shipping & Accounting (SAS) Resource Kit. To download the latest Resource Kit, perform the following:

1. Click [here](#).
2. Go to the Knowledgebase and search for “Resource Kit” (no quotes). Afterwards, select “Downloads” and then scroll down until you see “PC Systems”.
